DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. What is a disengagement plane? The examiner has not found support in the specification for the recitation of a disengagement plane, and has not been able to determine what a disengagement plane is in the context of fluidized bed mixers.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 1-8 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 97/12955. The reference discloses a process for producing free flowing detergent agglomerates. Starting materials are agglomerated in the presence of an inorganic double salt, which is preferably Burkeite (p. 4, lines 22+). This is done in a high speed mixer, and further agglomeration may take place in a low or moderate speed mixer, such as the Loedige "Ploughshare". The agglomerates may then be dried in a fluidized bed dryer (p. 5, lines 13-15). The starting materials most preferably include a surfactant in the form of a paste or the acid form of an anionic surfactant and dry detergent materials (p. 5, lines 1+). The surfactant most preferably comprises anionic surfactant (p. 7, lines 15-16). See Example I, in which the double salt is added as a sprayed aqueous solution. This reference differs from the claimed subject matter in that it does not disclose a method which reads on applicant's claims with sufficient specificity to constitute anticipation.

It would have been obvious at the time the invention was made to employ such a method, because this reference teaches that all of the steps recited by applicants are suitable for use in formulating an agglomerated surfactant composition. The person of ordinary skill in the surfactant art would expect the recited compositions to have properties similar to those compositions which are exemplified, absent a showing to the contrary.
